**INFORMATION**

To maintain offering premium products to our customers, we have performed a future-proof change in the creation and delivery of vehicle software. The “Ready-for-Future” process activates new or upgraded features in a customer’s vehicle after a successful software upgrade.

BMW of North America (BMW NA) has made information available online to customers about software versions, including any changes to vehicle functionality that will result from each update. BMW NA recommends that each BMW center updates its Repair Order (RO) form to include a notification to the customer of:

- Potential updates
- Where there is a change in existing functionality
- When features are added to the vehicle

Below is a template disclaimer we recommend that you include on ROs in the appropriate place to notify customers of potential updates and obtain their consent to install them. It contains a reference to the BMW NA website that provides a description of such updates.

“If necessary, your vehicle will be updated with the current software version applicable to your vehicle model. Details of any function improvements or new functions can be found online in the ConnectedDrive Store in the BMW Remote Software Upgrade area.”

As a reminder, the BMW NA Warranty Department’s requirements related to software updates and warranty claims can be found in the Warranty Policy & Procedures Manual. Please note that the sample disclaimer above is suggested for inclusion at the bottom of all ROs, including for customer pay repairs. However, each BMW center should ensure its ROs, invoices,

and other materials comply with all local rules and regulations pertaining to such disclaimers and obtaining consent from customers for vehicle modifications.
