

## Information

This TRI bulletin outlines the requirements for initializing the power windows for the affected models above.

In situations where the windows must be initialized, the following conditions must be met;

- Vehicle speed must be less than 1 MPH
- The vehicle requires a consistent, stable voltage source between 12-14.6v.

Warning: Ensure that any connected battery chargers do not deviate from the above required voltage.

- During initialization, the accelerator pedal must not be pressed.
- All doors must be closed

### **Specifically for G14, G15, G29, and G32:**

- The ambient temperature displayed in the cluster must be between 60° to 80°.

### **Specifically for G14:**

- Aside from the window that is being initialized, all of the other windows must be closed.
- The front and rear power windows must be initialized separately.
